Solar pumping System

Note:

Solar motor powers the new system for the supply of clean water based on the most widely available renewable energy, the sun. It is designed for easy use and requires no maintenance. It is the ideal solution for supplying water in remote areas, where the normal power supply of electricity from the power grid is inconsistent or completely unavailable

Sizing Layout

H (Static head):	Vertical height from the dynamic water level to the highest point of delivery.
B (Drawdown):	Lowering of water level depending on flow rate and recovery rate of the well.
D (Pipeline inner diameter):	
L (Pipe length):	Entire pipeline from the pump outlet to the point of delivery. Elbows and armatures must be added as an equivalent length of pipeline.
M (Motor cable):	The cable between controller and pump unit.
T (Tilt angle):	Angle of the PV generator surface from the horizontal plane.

Note:

- 1、Please read the manual carefully for all installation accessories, Please contact factory if you need all the above accessories.
- 2、Float Switch for Dry Protection is Optional for centrifugal pump, Because the centrifugal pump system has its own dry protection; However, for helical pump, it must be installed.
- 3、The pump shall be installed at least 1.5m away from the bottom of the well;
- 4、It is recommended to install a check valve every 70m of the vertical height of the pipeline.
